	Most Credible Undesired Outcome?									
Departmental	**Safety of Flight**	**Damage to Aircraft**	**Injury to People**	**Severity of Undesired Outcome**						
Refer to departmental documentation for department-specific outcome criteria, where applicable.	Catastrophic event	Hull loss	Loss of Life		**Critical (5)**	Medium (66)	High (316)	High (788)	Very High (1510)	Very High (2500)
	A large reduction in safety margins, physical distress or a workload such that operational personnel cannot be relied upon to perform their tasks accurately or completely	Substantial damage that requires Original Equipment Manufacturer support to repair	Loss of body part or Permanent impairment of a body function		**Major (4)**	Low (34)	Medium (159)	High (398)	High (761)	Very High (1260)
	A significant reduction in safety margins, a reduction in the ability of operational personnel to cope with adverse operating conditions as a result of an increase in workload or as a result of conditions impairing their efficiency	Out of limits damage to aircraft	Injury requiring hospitalization		**Moderate (3)**	Low (14)	Medium (66)	Medium (165)	High (315)	High (521)
	Operating limitation or nuisance	Within limits damage to aircraft	Medical treatment		**Minor (2)**	Low (4)	Low (19)	Low (48)	Medium (91)	Medium (151)
	Routine threat or hazard with little or no effect on the safe operation of the flight.	Cosmetic or no damage	First Aid / No injury or treatment		**Negligible (1)**	Low (1)	Low (3)	Low (6)	Low (11)	Low (18)

	Probability of Undesired Outcome				
	Extremely Improbable (1)	**Improbable (2)**	**Remote (3)**	**Probable (4)**	**Extremely Probable (5)**
What is the effectiveness of the barriers/controls between the hazard/occurence and the undesired outcome?	Barriers are highly effective, independent, and redundant in. Failure of barriers is only conceivable under extraordinary, compounding conditions.	Barriers are strong and reliable. Failure of barriers could occur in rare, abnormal conditions.	Barriers are only partially effective. Failure of barriers could occur under foreseeable but unusual conditions.	Barriers are weak, unreliable, or easily circumvented. Failure of barriers could occur under routine or expected conditions.	Barriers are ineffective or absent. Failure of barriers is expected under normal conditions.

	Quantitative Probability Guide				
What is the probability the hazard/occurrence would result in the undesired outcome?	0-5%	5-20%	21-35%	36-50%	>50%

Risk Level	TOLERABILITY	LEVEL OF INVESTIGATION	OUTPUT	RISK ACCEPTANCE	RISK MANAGEMENT
LOW	ACCEPTABLE	**NO INVESTIGATION REQUIRED**	NO CAP REQUIRED	DELEGATED TO PMSMS	TRENDING DATA AT DEPARMENTAL MEETING(S)
MEDIUM	TOLERABLE	**ABBREVIATED INVESTIGATION**	STATISTICAL TRENDING OR	DELEGATED TO PMSMS	TRENDING DATA AT DEPARMENTAL MEETING(S)
			CORRECTIVE ACTIONS REQUIRED	CERTIFICATE MANAGER	TRENDING DATA AT DEPARMENTAL MEETING(S)
HIGH	INTOLERABLE	**FULL INVESTIGATION**	CORRECTIVE ACTIONS REQUIRED	CERTIFICATE MANAGER	SAFETY MANAGEMENT COMMITTEE
VERY HIGH	INTOLERABLE	**FULL INVESTIGATION**	IMMEDIATE CONTAINMENT AND CORRECTIVE ACTION REQUIRED	CERTIFICATE MANAGER	DIRECT BRIEFING WITH THE ACCOUNTABLE EXECTUVIE SAFETY MANAGEMENT COMMITTEE
